

Agile Overview (AGLO)

Course Overview

The course provides a comprehensive look at all things agile. It covers the fundamentals of working in an agile way and also explains how to get the most from agile when using it to manage projects. It covers the risks and benefits of agile behaviours as well as getting practical experience of some of the key techniques used. Several agile methods are covered such as DSDM, Scrum, SAFe, Lean and Kanban.

Course Objectives

To give delegates a solid understanding of Agile by explaining what it is at a detailed level and describing what the drivers for Agile are.

Using facilitative discussion this course will enable delegates to understand what is behind Agile thinking and how and when to apply Agile behaviours and techniques to real life situations.

Who will the course benefit?

For team members who are involved in projects using (or about to use) Agile. Typical roles would include Project Manager/Team Leader, Business Analyst, Solution Developer and Tester/Quality Reviewer. It would also benefit business or customer stakeholders who would be part of an Agile team.

Understand how to combine the use of Scrum with other Lean and Agile approaches such as Kanban, eXtreme Programming (XP) and Agile Project Management (AgilePM).

Any pre-requisites ?

None
